Hiring Manager

IBM

Dear Hiring Manager,

I am applying for the Software Developer position at IBM. I have hands-on experience in full-stack development using React.js, Next.js, Node.js, and PostgreSQL, with a strong focus on building scalable and secure web applications.

Currently, I work at Maity Innovations Pvt. Ltd., where I develop REST APIs, implement role-based authentication, integrate payment gateways, and build real-time features using WebSockets. I also have experience with Docker, CI/CD pipelines, and version control using GitHub.

I hold a Master of Computer Applications degree and possess strong skills in JavaScript, backend development, and database design. I am eager to contribute to IBM's technology-driven teams and continue growing as a software developer.

Thank you for your consideration.

Sincerely,

Nayan Kr Bera
